Brief Summary in Lay Language

Comparison patients with radiological and / or pathological UIP (Usual interstitial pneumonia)-pattern with IPF (Idiopathic pulmonary fibrosis) and non-IPF

Brief Summary in Scientific Language

Based on retrospective data from the patient collective of the Department of Pulmonology and Pneumological Oncology of the Hospital München-Bogenhausen from the years 2002-2016, patients with interstitial lung diseases in chronic EAA and autoimmune diseases are identified and assigned with regard to their pathological, radiological and immunological findings. Both Groups were compared (history, functional status and mortality). Aims of the study are an assessment of the value of the pathological diagnosis, identifying risk groups within the observed subgroups for a more rapid disease progression.
