Brief Summary in Lay Language

[---]*

Brief Summary in Scientific Language

For psychiatric hospitals, dealing with suicidal behaviour in borderline personality disorder (BPD) patients is a major problem in everyday clinical life. In accordance with the guidelines, inpatient treatment is provided for suicidal patients across all diagnoses. This procedure is indicated for depressive patients with acute suicidal tendencies. Borderline personality disorder patients (BPD) differ. The inpatient treatment of BPD patients with suicidal expressions appears to be contraindicated, in the following frequent re-hospitalization occurs. The American APA also provides in its treatment guidelines that inpatient treatment and thus a process of psychiatry for BPD patients should be minimized. Patients learned to use the care system and seek inpatient treatment whenever life becomes more difficult. However, the question arises as what constitutes an appropriate approach in the treatment of BPD patients who communicate suicidally. In the first step of this research project, the different communication of suicidal tendencies between the two groups of BPD and depressive patients will be investigated. For this purpose, diagnosed BPD patients and depressive patients will be interviewed. Another aim is to find out whether a less intensive treatment setting such as day clinic is related to differences in the communication of BPD patients.

Organizational Data

■

DRKS-ID: **DRKS00019818**

- Date of Registration in DRKS: **2019/11/12**
- Date of Registration in Partner Registry or other Primary Registry: [---]*
- Investigator Sponsored/Initiated Trial (IST/IIT): **yes**
- Ethics Approval/Approval of the Ethics Committee: **Approved**
- (leading) Ethics Committee Nr.: **319/19 , Ethik-Kommission der Universität Ulm**

Secondary IDs

Health condition or Problem studied

- ICD10: **F60.3 - Emotionally unstable personality disorder**
- ICD10: **F61 - Mixed and other personality disorders**
- ICD10: **F33 - Recurrent depressive disorder**
- ICD10: **F32 - Depressive episode**

Interventions/Observational Groups

- Arm 1: **Patients with a borderline diagnosis are asked once about their experience and the communication of suicidal tendencies.**
- Arm 2: **Patients with a depressive illness are asked once about their experience and the communication of suicidal tendencies.**

Characteristics

- Study Type: **Non-interventional**
- Study Type Non-Interventional: **Observational study**
- Allocation: **Non-randomized controlled trial**
- Blinding: [---]*
- Who is blinded: [---]*
- Control: **Other**
- Purpose: **Diagnostic**
- Assignment: **Parallel**
- Phase: **N/A**
- Off-label use (Zulassungsüberschreitende Anwendung eines Arzneimittels): **N/A**

Primary Outcome

suicidal communication; questionnaire based on the nomenclature of Frey et al. 2019

Secondary Outcome

[---]*

Countries of recruitment

- **DE Germany**

Locations of Recruitment

- **Medical Center ZfP Südwürttemberg, Standort Weissenau, Ravensburg**

Recruitment

- Planned/Actual: **Actual**
- (Anticipated or Actual) Date of First Enrollment: **2019/11/14**
- Target Sample Size: **90**
- Monocenter/Multicenter trial: **Monocenter trial**
- National/International: **National**

Inclusion Criteria

- Gender: **Both, male and female**
- Minimum Age: **18 Years**
- Maximum Age: **65 Years**

Additional Inclusion Criteria

**with current suicidal tendency (min. hospital-internal suicide risk level 2)
HD F32.x/F33.x, HD/ND F60.3/F61
Age 18-65 years
treated on ward/day clinic: 2056, 2011, 2021**

Exclusion criteria

**not capable/willing to participate;
Duration of stay min. 3 days (due to feasibility of the study)**

Addresses
